

CVC™ PA

Adhesive Mortar For Thermal Insulation Panels

Product Advantages • It isn't affected by water, • Ensures a very good bonding on concrete, brick, gas concrete, plast prefabricate panel etc. surfaces. • Used in indoor and outdoor locations, • It is suitable for vertical, horizontal and ceiling applications, • Resistant against external impacts and frost. • Economical.	ct Number of Application	501 It is used for adhesion of B	Extruded polystyrene (XPS) or expanded polystyrene (EPS)	
Areas of Application It is used for adhesion of Extruded polystyrene (XPS) or expanded polystyrene (E sheets to interior and exterior walls of the building, to horizontal, vertical and ceiling • It isn't affected by water, • Ensures a very good bonding on concrete, brick, gas concrete, plast prefabricate panel etc. surfaces. • Used in indoor and outdoor locations, • It is suitable for vertical, horizontal and ceiling applications, • Resistant against external impacts and frost. • Economical.	of Application

application is carried out under hot weather, moisturizing should be made.	(
vary according to weather conditions, never add water into powdered produ	Application 2	25 kg. of powder must be added into about 6,75-7,00 liter of fresh clean water (may vary according to weather conditions, never add water into powdered product) and is mixed for 3-4 minutes with a low revolution mixer until a homogenous mix is		
temperature) of clean and cool mixing water and with a low-speed and suital mixer, a smooth homogeneous mixture is obtained in 3-4 minutes and kept wait for 5-10 minutes. Maturing material is mixed again and becomes ready for use. Washouldn't be added to powder material. Application is recommended to be main temperatures of +5 and +35 °C. Prepared material is placed to across all sides of back surface of sheets constar and is placed to middle parts spot by spot. Sheets are pressed to the surfaces to bond; they are placed to their set square by tapping on by means of wooden rubber tamper and are ensured to be bond. After the adhesive is cured enoughed to the surface of sheets are fixed with pins mechanically.	application 1	temperature) of clean and cool mixing water and with a low-speed and suitable mixer, a smooth homogeneous mixture is obtained in 3-4 minutes and kept waiting for 5-10 minutes. Maturing material is mixed again and becomes ready for use. Water shouldn't be added to powder material. Application is recommended to be made in temperatures of +5 and +35 °C. Prepared material is placed to across all sides of back surface of sheets constantly and is placed to middle parts spot by spot. Sheets are pressed to the surfaces to be bond; they are placed to their set square by tapping on by means of wooden or rubber tamper and are ensured to be bond. After the adhesive is cured enough, sheets are fixed with pins mechanically.		
Points to take into • The prepared material must be used in approximately 3 hours.	to take into	The prepared material must be used in approximately 3 hours.		
	deration	After the sheets are placed, the forming of film layer as a result of drying of mortar and the angle and the latter are related.		
		on the surface should be prevented.		
		 It should be applied under +5°C. Mechanical pin process should be carried out early when the application is made under windy conditions and on higher floors.
